a Right on average, and so is a guess
Observed citations
Model's score
Guess: mean of granted patents, same center and year
Citations per marginal application
Stricter quintile (top-coded; 2–5 pooled, raw)
2–5 (raw)
b Case by case, no better than a fair guess
Guess's error the model removes (%)
−1%
+7%
+4%
Absolute error, top-coded
Squared error, top-coded
Squared error, log scale
c Right as rankings, weakly; a guess cannot rank
Granted
Rejected
Prior-art citations (log scale)
Rank correlation within center × year: rejected 0.16, granted 0.17
Score decile, within center × filing year
d A single score is a range, about as wide as a guess's
Guess
Model's score
50% within ×2.3
80% within ×3.65
Density, marginal applications
Observed ÷ predicted, (1 + citations) / (1 + prediction), log scale
